PGx-SUPPORT

Pharmacogenomics-Supported Psychotropic Prescribing Trial

Starting or changing medications for your mental health?

You may be eligible for pharmacogenomic testing through a research study at the University of Manitoba.

Your genes can determine how your body responds to medication. Knowing more about your genes may help your doctor select a medication for you.

We are looking for adults:

- ▢ Age 18 years or over
- ▢ Starting or changing medication for mental health

What will you be asked to do?

- ▢ Provide a saliva sample and complete questionnaires
- ▢ Complete questionnaires three months after the test
- ▢ Results will be provided to you and your doctor at no cost to you

Your doctor must request this test. Ask your doctor if the **PGx-SUPPORT** study is right for you!

For more information:

Email: pharmpgxlab@umanitoba.ca

Phone: (431) 294-7781

You will be compensated for your time participating in the study.
